## VI Info Tech Ltd. invites application from diploma holders with good communication skill in English for the post of supervisor. Write :

(a) An application letter

5

(b) Resume

5

Without revealing your identity.

## VII Prepare precis of the following passage.

The world has come smaller with the invention of communication devices such as the telegraph, telephone, radio, television etc. The communication at present is much faster and easier with the help of the satellites of space. Not long ago, communication scientists surprised the whole world by their wonderful programme called 'Space-bridge'. Five different countries in various parts of the world were linked together through satellites. It was indeed one of the greatest achievements in the field of communication.

Communication can be defined as a method of transmitting and receiving ideas, information and messages which are of vital importance to the family, as well as to the society. The application of communication techniques has changed the structure of societies and altered the course of world history.

Communication among animals is an interesting study. Bees for instance, have a remarkable system of communication. When a bee discovers a source of nectar, it informs the bees in the hive through a special dance. The location of the source is communicated by the kind of dance and the amount of the nectar by the vigorousness of the dance. Recently it has been observed that sea creatures talk. Dolphins emit a distinct noise to seek help and studies have been undertaken towards achieving communication with the aquatic mammals.

5

## VIII Expand the idea into a paragraph.

(a) Time and tide waits for none.

OR

(b) Golden words are never repeated.

5

IX Attempt any one of the following :

- (a) You are the student secretary of the 'Language lab' in your college. Write a **report** on its activities to publish in your college magazine.

4

OR

- (b) Prepare a **note** on the following passage.

Japanese grocery stores had a problem. They are much smaller than shops in the USA and therefore don't have room to waste. Watermelons, big and round, wasted a lot of space. Most people would simply tell the grocery stores that watermelons grow round and there is nothing that can be done about it.

That is how majority of people would respond. But some Japanese farmers took a different approach. If the supermarkets wanted a square watermelon, they asked themselves, 'How can we provide one ?' It wasn't long before they invented the square watermelon.

The solution to the problem of round watermelons was solved as the farmers did not assume it was impossible and simply asked how it could be done. They found out that if you put the watermelon in a square box when they are growing, the watermelon will take on the shape of the box and grow into a square fruit. This made the grocery stores happy and had the added benefit that it was much easier and cost effective to ship the watermelons. Consumers also loved them because they took less space in their refrigerators which are much smaller than those in the USA meaning that the growers could charge a premium price for them.
