6

- X Chitra is participating in an environment seminar and wishes to make a presentation on disaster management. Prepare three slides using the information given below.

A disaster is a serious disruption that strikes the areas inhabited by man. It involves widespread destruction of human, material, environmental loss etc. Disasters can be classified as natural and man-made. Some of the natural disasters are landslides, hurricanes, wildfire, tornadoes, floods, earthquakes and tsunamis. Man-made disasters are disasters caused or induced by human activities. These include hazardous material emergencies like chemical spills and groundwater contamination, radiological emergencies, reservoir induced earthquake, nuclear leakage, terrorism, civil unrest and many more. Man-made disasters are equally dangerous as they pose great threat to both people and property. Disaster management is a very important process to reduce loss of life and property, and to provide rescue, relief, rehabilitation and recovery. It is creation of plans to reduce vulnerability to hazards and cope with disasters. It does not eliminate the disaster but tries to minimize its effect.
